Fantasies by spoons

Spoons are striking variety of forms and purposes. Sometimes you can find weird things made out of spoons.

I recently bought a composition with the spoon by Rogers Co and handle table knife.

The purpose of such a product is not entirely clear (or not completely clear). Friends have put forward a few suggestions:

it seems that it is - a joke,

candlestick,

stand under the guest card.

And even - statuette by constructionism style, for example, the "Worker and Peasant".

What do you think about it?

Some time ago I bought a set of elegant items for silver knife rest, includes a small spoon and a fork.

I found an interesting story in continuation of the theme products using spoons. An exhibition of products from aluminum spoons was organized in a large Russian city of Yekaterinburg on the border of Europe and Asia. It is a kind of performance "First there was a spoon ...".

The idea came to the initiator and organizer of the competition: what will happen to the usual aluminum spoon if it was given to creative people? Let jewelers create something special with this spoon, and we'll admire ...

Amateurs and professional masters of the Urals cities of Yekaterinburg, Nizhny Tagil and Chelyabinsk set out many products. Part of the artifacts of the exhibition is shown in the illustrations.

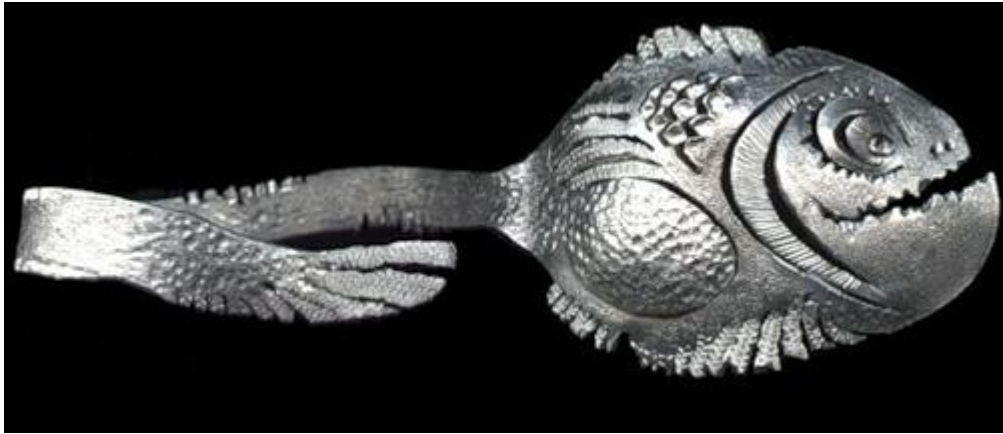

To emphasize the author's intention, the names are given to their items. A problem is whether the author's idea shown in the craft will match our perception. This is very subjective.
